

Self intro

Hello sir, my name is Gunsekaran v and I am coming from Namakkal and I am currently staying in saligramam, Chennai. I have completed by UG Engineering from Knowledge institute of technology ,Salem. For the past three years I have been working as a python developer in INDIA INFOTECH Chennai, My technical skills are in frontend I know HTML, CSS, Bootstrap, Javascript, in backend I know Python, in frameworks I know Flask and Django and in database I know MySQL.

Company profile:

My company name is INDIA INFOTECH and it is a startup company with total employees of 20 and it is located in Salem. It is a service based company providing software solutions to Corporates, E-commerce, Travel, Finance, Tourism, Entrepreneurs.

Details:

Name: INDIA INFOTECH

Hr name: MOKESH M

Hr mail: hrd@indiainfotech.net.in

Hr ph: 9384870590

Manager : NAGARAJ J

Manager Mail: nagaraj.j@indiainfotech.net.in

Manager ph: 9940235474

Company mail: info@indiainfotech.net.in

Company services: cloud solutions, AI, Data Analytics

Website: www.indiainfotech.net.in

Address: no:136,Arcot Rd(Shyamala Towers),saligramam,Chennai-93

Joining date: 8/06/2022

Salary: 32,434

Employ id: INF220806G

Designation: Analyst

Counter offer company name : QUANTUM BYTE, HYDRABAD

Offer: 6lakh

Client sector:

manufacturing ,ecommerce, health care, banking

What's your roles and responsibilities in your company?

- Developing RESTful APIs and backend logic for various system modules.
- Integrating the system with databases and ensuring data security.
- Writing automated tests and ensuring code quality.
- Documenting APIs, modules, and components.
- Collaborating with cross-functional teams.
- Continuously improving the program(app) functionality and performance.

Day to day activities:

Usually I login at 9.30 am and I check my email and respond those email and then later we have team meeting and in that we discuss about yesterday task and issues faced in that task and after the meeting i start resuming yesterday tasks or starts with today task. I go for the lunch by 1.30 pm and in half an hour I resume back to my work and I discuss with my team mates with any issues faced and I try to resolve it after that I update my daily tasks with team and TL and later I logoff by 6.30 or 7.00 pm.

Why you switch your current job?

I wish to improve my current financial status and I also wish to update my technical knowledge further with new technologies and I hope the new work environment will provide me with this. So I wish to switch my current job .

Why should i hire you?

I believe that I would be the perfect match for the job description and required skills to fulfill your job description. I am sure I will realize my career dreams with your company. I am work-oriented person and smart thinker and ready to learn new things, I will try my level best to increase your company's values.

see yourself next 5 years?

In next 5 years, I want to see myself in a good hierarchical position and wish to upgrade my technical knowledge and technical skills. Wish to learn team leading and managerial skills.

Strength:

I am a quick learner and quick adaptor to all working environments. Inclined to learn new things. Work focused person and optimistic person. I am basically a punctual person. Good team player and easily mingle with team.

Weakness:

Focusing on single work at a time for the cent percent efficiency of the work is my weakness and I am practicing to deliver multi-tasking with the same efficiency.

Challenges faced:

My view on challenges is, only the challenges can thrive us to run towards new learnings and problem solving skills. So in general I faced some challenges in project and in a course of time I handled it.

Previous Company Resign

To be frank I got good opportunities to develop my interpersonal skills and to gain technical knowledge to some extent. But now I need to upgrade my skills further with a new employer and with a new working environment. And It's the time to evaluate my stuff and to take a next step in my career growth.

Why choose python?

Comparing to other programming languages I feel python is easier to learn and it is easier to code and also python is booming from 2018 and AI, data science fields are more compatible with python language. Since future is full of AI I hope always there is need for python so I choose python .

Project 1- Supply Chain Transparency and Compliance Platform

Abstract

The Cybersecurity Assessment and Risk Management Tool is a comprehensive web application designed to assess and manage cybersecurity risks within the supply chain of telecommunications equipment manufacturers. It helps identify vulnerabilities, monitor threats, and implement mitigation strategies to safeguard sensitive data and critical infrastructure.

Roles and responsibilities

Risk Assessment: Identify and mitigate cybersecurity risks within the supply chain.

Monitoring: Continuously monitor for threats and generate security reports.

Compliance: Ensure compliance with cybersecurity regulations and standards.

Tool Development: Design and maintain the cybersecurity assessment platform.

Incident Response: Develop and execute plans to manage security breaches.

Issues faced:

1. **Data Security:** Keeping supply chain data safe from cyber threats.
2. **Compliance:** Updating the platform to follow new cybersecurity rules.
3. **Threat Detection:** Staying ahead of new cyber threats.

4. **Integration:** Connecting the platform with current supply chain systems.
5. **Stakeholder Engagement:** Getting all partners involved and working together.
6. **Resources:** Managing limited resources effectively.
7. **User Training:** Teaching users how to use the platform properly.
8. **Scalability:** Making sure the platform can grow with the supply chain.
9. **Incident Response:** Preparing for and handling security breaches.
10. **Performance:** Keeping the platform fast and reliable.

leader

Modules:

Modules:

1.Vulnerability Scanning Module:

Conducts vulnerability scans across the supply chain.

2.Threat Monitoring Module:

Monitors for cybersecurity threats in real-time.

3.Incident Response Planning Module:

Helps in developing and implementing incident response plans.

4.Risk Assessment Module:

Evaluates cybersecurity risks across the supply chain.

5.Supplier Security Assessment Module:

Assesses the cybersecurity posture of suppliers and partners.

6.Compliance Monitoring Module:

Monitors compliance with cybersecurity regulations and standards.

7.Security Controls Implementation Module:

Implements security controls and measures.

8.Real-time Alerts Module:

Sends real-time alerts and notifications for security incidents.

9.Security Training and Awareness Module:

Provides cybersecurity training and awareness programs.

10.Reporting and Analytics Module:

Generates reports and analytics on cybersecurity metrics.

Functionality:

1. **Risk Assessment:** Identify and mitigate supply chain cybersecurity risks.

2. **Threat Monitoring**: Continuously detect and report emerging threats.
3. **Compliance Checks**: Ensure adherence to cybersecurity regulations.
4. **Incident Response**: Develop and execute plans for security breaches.

Packages and Libraries:

1. **Flask**: Web framework for building the platform.
2. **PostgreSQL**: Database toolkit for managing data.
3. **Pandas**: Data manipulation and analysis.
4. **Scikit-learn**: Machine learning for threat detection.
5. **Celery**: Task queue for handling background tasks.
6. **Jinja2**: Templating engine for dynamic web pages.
7. **Requests**: HTTP library for API interactions.
8. **Gunicorn**: WSGI server for deploying the web application.

ORM used in project

Django's default ORM is sqlite3. Using python class and objects we can connect with the database by models.py module. At development side we use sqlite3 and for production side we use ORM to connect with MySQL database.

Middleware used in project

Middleware is a way to process requests and responses globally before they reach the view or after they leave the view. Middleware components are executed in the order they are defined in the **MIDDLEWARE** setting in your project's settings file (**settings.py**). Middleware allows you to perform various tasks such as authentication, request/response processing, security checks, and more. (Authentication Middleware, Session Middleware, CSRF Middleware, Cache Middleware, Security Middleware, Compression Middleware, Logging Middleware, Custom Middleware)

API used in project

1. **Vulnerability Scanning API**: Conducts vulnerability scans.
2. **Threat Monitoring API**: Monitors for cybersecurity threats.
3. **Incident Response API**: Helps in incident response planning.
4. **Risk Assessment API**: Conducts cybersecurity risk assessments.

5. **Supplier Security Assessment API:** Assesses supplier cybersecurity posture.
6. **Compliance Monitoring API:** Monitors compliance with cybersecurity regulations.
7. **Security Controls API:** Implements security controls and measures.
8. **Alerts API:** Sends real-time alerts and notifications.
9. **Training and Awareness API:** Provides cybersecurity training and awareness.
10. **Reporting and Analytics API:** Generates reports and analytics

Project 2 – Predictive Analytics and Supplier Performance Management System

Abstract

The Predictive Analytics and Supplier Performance Management System uses advanced analytics and machine learning to improve supply chain efficiency. It predicts disruptions, evaluates supplier performance, and offers insights to optimize operations, ensuring high quality and reliability while managing risks and enhancing supplier relationships.

Module

1. Predictive Analytics Module:

Implements predictive analytics algorithms for risk forecasting.

2. Supplier Performance Evaluation Module:

Evaluates supplier performance metrics.

3. Risk Prediction Models Module:

Develops predictive models for risk identification.

4. Supplier Relationship Management Module:

Manages and enhances relationships with suppliers.

5. Optimization Recommendations Module:

Provides optimization recommendations for sourcing strategies.

6.Real-time Monitoring Module:

Monitors supplier performance and supply chain metrics in real-time.

7.Data Visualization Module:

Visualizes supply chain data and performance metrics.

8.Collaboration Tools Module:

Facilitates communication and collaboration between teams and suppliers.

9.Alerting Mechanisms Module:

Sets up alerts and notifications for critical events.

10.Reporting and Analytics Module:

Generates reports and analytics on supplier performance and supply chain risks.

Issue faced:

- 1.**Data Quality:** Ensuring accuracy and completeness of data for reliable predictions.
2. **Model Accuracy:** Improving the precision and reliability of predictive analytics models.
3. **Integration Complexity:** Addressing challenges in integrating diverse data sources and systems.
4. **Change Management:** Overcoming resistance and ensuring adoption of predictive insights.
5. **Resource Constraints:** Managing sufficient resources for data acquisition, storage, and analysis.
6. **Ethical Considerations:** Addressing ethical concerns related to data privacy and usage.
7. **Scalability:** Ensuring the system can handle increasing data volumes and complexity.
8. **Maintenance:** Regularly updating and maintaining models and algorithms for relevance and accuracy.

Functionality:

1. Vulnerability Scanning Module:

Conduct automated vulnerability scans across the supply chain to identify weaknesses and potential entry points for cyber threats.

2.Threat Monitoring Module:

Continuously monitor for cybersecurity threats, including malware, phishing attacks, and unauthorized access attempts.

3.Incident Response Planning Module:

Develop and implement incident response plans to address cybersecurity incidents promptly and effectively.

4.Risk Assessment Module:

Evaluate cybersecurity risks across the supply chain based on severity, likelihood, and potential impact.

5.Supplier Security Assessment Module:

Assess the cybersecurity posture of suppliers and partners to ensure they meet security requirements.

6.Compliance Monitoring Module:

Monitor compliance with cybersecurity regulations, standards, and best practices.

7.Security Controls Implementation Module:

Implement security controls and measures to mitigate identified vulnerabilities and risks.

8.Real-time Alerts Module:

Receive real-time alerts and notifications for suspicious activities and security breaches.

9.Security Training and Awareness Module:

Provide cybersecurity training and awareness programs for employees and stakeholders.

10.Reporting and Analytics Module:

Generate reports and analytics on cybersecurity risks, vulnerabilities, incidents, and compliance status.

Packages and Libraries used:

- 1.**Django**: Backend web framework.
2. **React.js or Angular**: Frontend framework.
3. **PostgreSQL**: Database management system.
4. **Nessus or OpenVAS**: Vulnerability scanning tools.
5. **Splunk or Elastic SIEM**: Incident response platforms.
6. **Tenable or Qualys**: Compliance monitoring platforms.
7. **JWT (JSON Web Tokens)**: Authentication mechanism.
8. **AWS or Azure**: Cloud hosting and scalability.
9. **Encryption Libraries**: Ensures data security.
10. **Data Visualization Libraries**: Visualizes reports and analytics
